

Proper Handling & Storage

LIFT BOARDS

Always lift boards off the board below, never slide board on board or drag the stack.

CORRECT HANDLING VERTICALLY

Always carry the boards on edge, but do not store on edge.

INCORRECT HANDLING HORIZONTALLY

Never carry the boards on edge horizontally. It may cause the board broken easily.

STORAGE

Boards should be stored under cover on a flat base, clear of the ground. If stored in the open the stack should be fully protected from weather. If stored on racks, boards should be fully supported across their width.

STACKING

Boards are stacked a max of 900mm high on firm level ground. If two or more pallets are stacked, the stack height should be not more than 3200mm
